Setup Your Development Environment

- Install your favourite IDE (vscode, pycharm, etc..)

- Install conda or other python virtualenv and create a new virtual env

```
conda create -n data-pipeline python==3.8
```

- Install kedro

```
pip install kedro==0.18
```

- Check your kedro version

```
kedro -V
```

we are using python=3.8 and kedro 0.18 here
